

TKHP series

**High-Performance cable carriers
for long travel lengths and
high additional loads**

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH
as a national or international registration in the following countries:
tsubaki-kabelschlepp.com/trademarks

Subject to change without notice.

- | | | | |
|--|--|---|---|
| 1 Aluminum stays available in 1 mm width sections | 4 Cable-friendly interior – no interfering edges | 7 Replaceable glide shoes for increased service life in gliding application | 10 With integrated roll for standard guide channels |
| 2 Plastic chain link plates | 5 Fixable dividers | 8 Robust, multiple stop system | 11 Easy replacement of chain links within the cable carrier |
| 3 Quick and easy opening to the inside or outside for cable laying | 6 Dividers and subdivision for separating the cables | 9 End connectors made of seawater-resistant stainless steel | 12 With roller damping |

Features

- | | |
|---|--|
| » Massive, enclosed, stain-repellent stop system | » Maintenance-free |
| » Massive sidebands through robust double fork-bracket-construction | » Linear force curve in the sideband |
| » Sidebands easy to assemble | » Quiet and low-wear operating through polygon-optimized contour and radii |
| » Reinforced symmetrically arranged pin bore connection for better force transmission | » Reduce drive power through less friction |
| » Integrated noise damping | |
| » Quick and easy opening to the inside or outside for cable laying | |
| » Soil-resistant outer contour | |
| » Easy change of components | |

Very smooth running of the roller system due to almost continuous running surface.

A non-slip structure on the running surface prevents one-sided roller wear after a standstill.

Roller chain for travel distances up to 1500 m.

RSD version with roller damping to reduce noise and wear by up to 50 %.

Aluminum stay RMF – frame stay solid

- » Aluminum profile bars for heavy loads and large cable carrier widths. Easy threaded connection.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** Threaded joint easy to release.

Stay arrangement on every 2nd chain link, **standard unsupported (HS: half-stayed)***

Stay arrangement on each chain link (**VS: fully-stayed**)

1 mm B_i 100 – 800 mm in **1 mm width sections**

* Gliding arrangement: Inner radius fully-stayed, Outer radius half-stayed.

The maximum cable diameter strongly depends on the bending radius and the desired cable type. Please contact us.

Calculating the cable carrier length

Cable carrier length L_k

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length L_k rounded to pitch t for odd number of chain links

h _i [mm]	h _g [mm]	h _{g'} [mm]	B _i [mm]*	B _k [mm]	B _{EF} [mm]	KR [mm]				q _k [kg/m]
58	84	90.5	100 – 800	B _i + 54	B _i + 54	240	300	350	400	6.02 – 13.12

Divider systems

As a standard, the divider system is mounted on every 2nd chain link on the inside plate.

As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

For applications with lateral acceleration and free hanging on the side, the dividers can be attached by simple insertion of a fixing profile into the RMF stay, available as an accessory (**version B**).

Divider system TS0 without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	n _T min
A	7,5/10,5*	15	11	-	-
B	7,5/10,5*	15	11	5	-

* With glide shoes

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	n _T min
A	7,5/10,5*	15	11	-	2
B	7,5/10,5*	15	11	5	2

* With glide shoes

The dividers can be moved within the cross section (version A) or fixed (version B).

TKHP85-R

TKHP85-RSD

High-Performance cable carrier with integrated roller

Pitch
85 mm

Inner height
58 mm

Inner widths
100 – 800 mm

Bending radii
240 – 400 mm

Stainless steel ball bearings with application-specific lubrication and plastic rollers ensure quiet and smooth operation. Integrated, low-wear damping systems minimize the mechanical load for the entire system.

The cable carrier type TKHP85-RSD (Shock Damping) uses roller damping. The rollers of the RSD variant are damped when they pass over each other, which reduces both the mechanical load and the noise pollution when they roll over by up to 50 %.

The use of roller damping is not always necessary. An undamped cable carrier system can also be used for low-speed applications.

- » TKHP85-R with rollers
- » TKHP85-RSD with rollers and shock absorber
- » suitable for all long travel applications
- » quiet and low-vibration operation
- » space-saving and cost-optimized
- » long service life – low maintenance
- » easy access to rollers
- » minimized loads on cable carrier and cables
- » low push and pull forces
- » high travel speed and acceleration
- » large additional loads possible
- » retrofit of existing systems
- » exchange other makes up to 100 %
- » integration of existing guide channels

- » **Inside/outside:** Threaded joint easy to release.

Rolling arrangement | Cable carrier with integrated roller

KR [mm]	H [mm]	G0 module RKR [mm]	L _B [mm]	U _B [mm]	q _z max [kg/m]
250	351	600	1840	1030	100
310	351	600	2200	1230	100
360	351	600	2520	1400	90
500	351	600	3410	1880	75

Speed
up to 10 m/s

Acceleration
up to 50 m/s²

Travel length
up to 1500 m

Additional load
up to 100 kg/m

The rolling cable carrier must be guided in a channel.
See p. 866.

The G0 module mounted on the driver is a defined sequence of 6 adapted KR/RKR link plates.

Our technical support can provide help for rolling arrangements:

Aluminum stay RMF –
frame stay solid

- » Aluminum profile bars for heavy loads and large cable carrier widths. Easy threaded connection.
- » Available customized in **1 mm grid**.
- » **Inside/outside:** Threaded joint easy to release.

Stay arrangement on every
2nd chain link, **standard**
(**HS: half-stayed**)

Stay arrangement on each
chain link (**VS: fully-stayed**)

1 mm B_i 100 – 800 mm
in **1 mm width sections**

The maximum cable diameter strongly depends on the bending radius and the desired cable type. Please contact us.

Calculating the
cable carrier length

Cable carrier length L_k

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length L_k
rounded to pitch t for odd
number of chain links

h_i [mm]	h_g [mm]	h_{g'} [mm]	B_i [mm]*	B_k [mm]	KR [mm]				q_k [kg/m]
92	117.5	118	100 – 800	B _i + 70	250	310	360	500**	10.37 – 17.47

* in 1 mm width sections ** When using this KR please contact our technical support.

Divider systems

As a standard, the divider system is mounted on every 2nd chain link on the inside plate.

As a standard, dividers and the complete divider system (dividers with height separations) can be moved in the cross section (**version A**).

For applications with lateral acceleration and free hanging on the side, the dividers can be attached by simple insertion of a fixing profile into the RMF stay, available as an accessory (**version B**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	n _T min
A	7.5	15	11	-	-
B	10	15	11	5	-

The dividers can be moved within the cross section (version A) or fixed (version B).

Divider system TS1 with continuous height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	n _T min
A	7.5	15	11	-	-
B	10	15	11	5	-

The dividers can be moved within the cross section (version A) or fixed (version B).

Height separation

Please state the designation of the divider system (**TS0, TS1,...**), the version, and the number of dividers per cross section [n_T].

When using divider systems with height separation (**TS1**), please additionally state the position (e.g. VD1) viewed from the left driver belt. You are welcome to add a sketch to your order.

End connectors – steel short (standard)

The connection variants on the fixed point and on the driver can be combined and changed later on, if necessary.

Connection point

F – fixed point
M – driver

Connecting surface

A – connecting surface outside
I – connecting surface inside

Connection type

A – threaded joint outside (standard)
I – threaded joint inside

Order example

Steel	F	A	I
Steel	M	A	I
End connector	Connection point	Connection type	Connecting surface

We recommend the use of strain reliefs at the driver and fixed point. See from p. 866.

End connectors LF - steel long

The connection variants on the fixed point and on the driver can be combined and changed later on, if necessary.

▲ Assembly options

- Connection point**

 - F - fixed point
 - M - driver
- Connecting surface**

 - A - connecting surface outside
 - I - connecting surface inside
- Connection type**

 - A - threaded joint outside (standard)
 - I - threaded joint inside

Order example

Steel LF	F	A	I
Steel LF	M	A	I
End connector	Connection point	Connection type	Connecting surface
