

# UNIFLEX Advanced series

**Light, quiet all-rounder with a wide range of applications\***

\* Some features can be different for certain types for design reasons.

|  |   |   |   |
|--|---|---|---|
| <b>1</b> Universal mounting bracket (UMB) with integratable strain relief comb | <b>4</b> Top-mounted frame stay                   | <b>8</b> Robust double-stroke system for long unsupported lengths | <b>12</b> Single-part end connectors with integratable strain relief comb |
| <b>2</b> Designs with inside or outside opening stays                          | <b>5</b> Single-part links (type 020)             | <b>9</b> Easy divider fixing                                      |   |
| <b>3</b> Extremely fast and easy to open due to ball joint mechanism           | <b>6</b> Favourable ratio of inner to outer width | <b>10</b> Very quiet through integrated noise damping             |   |
|  | <b>7</b> Many separation options for the cables   | <b>11</b> Lateral wear surfaces                                   |   |

## Features

- » Extensive unsupported lengths
- » High torsional rigidity
- » Good ratio of inner to outer width
- » Numerous custom material types for custom applications available
- » Easy assembly and fast cable laying
- » Assembly tools available
- » Stays with ball joint opening on both sides
- » Many possibilities for internal subdivision

- » Wear surfaces for gliding applications with extended travel lengths

Fixable dividers for arrangements rotated by 90° and applications with high lateral accelerations – no additional spacers required

**Lateral wear surfaces – for long service life for applications where the carrier is rotated through 90°**

### Simple fixing of strain relief comb or C-Rail in the connector

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

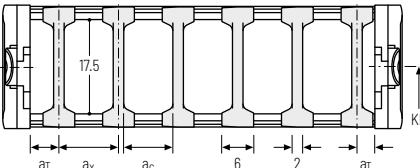

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed on the stay through rotation.

The arresting cams snap into the catch profiles in the covers (**version B**).

### Divider system TSO without height separation

The dividers can be moved in the cross section.

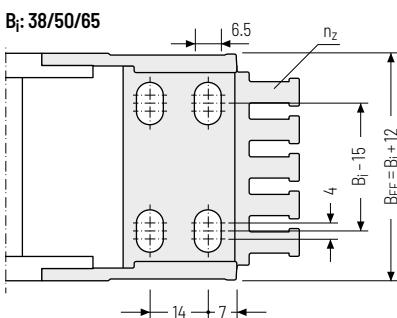

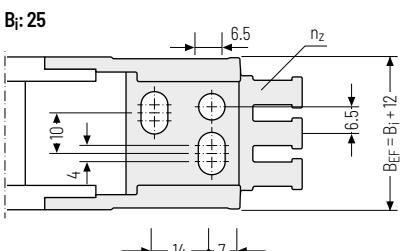

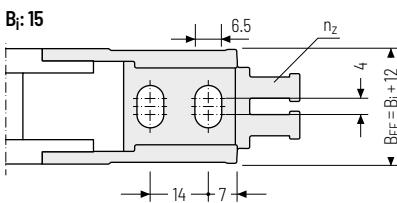

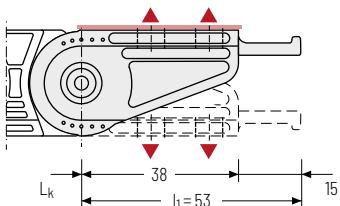

### Order example

|  |                |   |         |   |       |
|--|----------------|---|---------|---|-------|
|  | TSO            | . | A       | . | 3     |
|  | Divider system |   | Version |   | $n_T$ |

Please state the designation of the divider system (**TSO**), the version, and the number of dividers per cross section [ $n_T$ ]. You are welcome to add a sketch to your order.

### Single-part end connectors - plastic (with integrated strain relief)

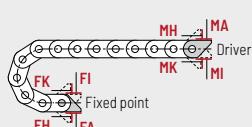

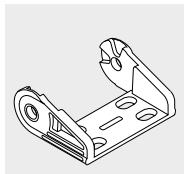

The plastic end connectors can be connected from above or below. The connection type can be changed by altering the position of the end connector.

▲ Assembly options

| QuickTrax® series       | $B_1$ [mm] | $B_{EF}$ [mm] | $n_2$ |
|-------------------------|------------|---------------|-------|
| UNIFLEX Advanced series | 15         | 27            | 2     |
|                         | 25         | 37            | 3     |
|                         | 38         | 50            | 4     |
|                         | 50         | 62            | 5     |
|                         | 65         | 77            | 6     |

The end connectors are also available as an option **without** integrated strain relief. Please state when ordering.

**Connection point**  
**F** - fixed point  
**M** - driver

**Connection type**  
**A** - threaded joint outside (standard)  
**I** - threaded joint inside  
**H** - threaded joint, rotated 90° to the outside  
**K** - threaded joint, rotated 90° to the inside

EasyTrax® series

**Pitch**  
45.5 mm

**Inner height**  
26 mm

**Inner widths**  
25 - 130 mm

**Bending radii**  
52 - 200 mm

## Stay variants

**Design 020** ..... page 164

### Closed frame

- » Weight-optimised, closed plastic frame with particularly high torsional rigidity.
- » **Outside/inside:** not openable.

**Design 030** ..... page 165

### Frame with outside detachable stays

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Outside:** openable and detachable.

**Design 040** ..... page 166

### Frame with inside detachable stays

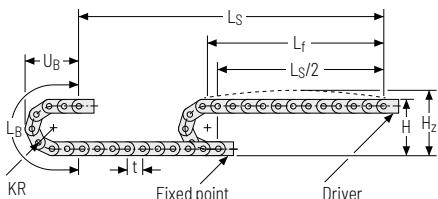

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Inside:** openable and detachable.

### EasyTrax®

For an openable cable carrier with 25 mm inner height we recommend the series EasyTrax® 1455 **ET1455** from page 258.

## Unsupported arrangement

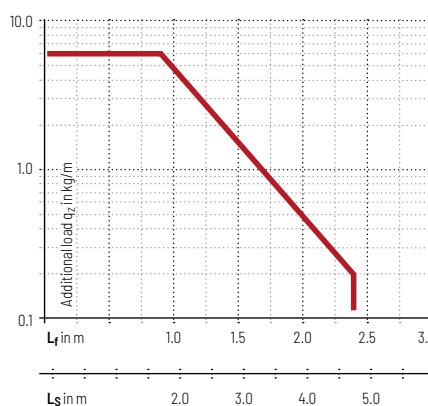

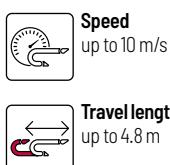

| KR [mm] | H [mm] | Hz [mm] | L_B [mm] | U_B [mm] |
|---------|--------|---------|----------|----------|
| 52      | 140    | 165     | 255      | 116      |
| 65      | 166    | 191     | 296      | 129      |
| 95      | 226    | 251     | 390      | 159      |
| 125     | 286    | 311     | 484      | 189      |
| 150     | 336    | 361     | 563      | 214      |
| 180     | 396    | 421     | 657      | 244      |
| 200     | 436    | 461     | 720      | 264      |

**Load diagram for unsupported length** depending on the additional load.

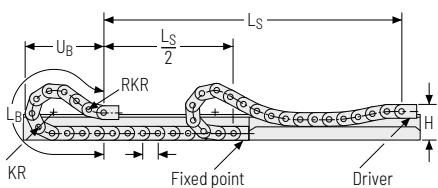

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight  $q_k = 0.75 \text{ kg/m}$  with  $B_f 38 \text{ mm}$ . For other inner widths, the maximum additional load changes.

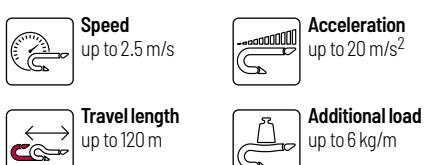

|                          |                       |                   |

## Gliding arrangement | GO module with chain links optimized for gliding

| KR [mm] | H [mm] | GO module RKR [mm] | L_B [mm] | U_B [mm] |
|---------|--------|--------------------|----------|----------|
| 52      | 108    | 225                | 780      | 377      |
| 65      | 108    | 225                | 825      | 389      |
| 95      | 108    | 225                | 1007     | 450      |
| 125     | 108    | 225                | 1189     | 508      |
| 150     | 108    | 225                | 1371     | 573      |
| 180     | 108    | 225                | 1599     | 655      |
| 200     | 108    | 225                | 1781     | 723      |

The gliding cable carrier must be guided in a channel. See p. 866.

The GO module mounted on the driver is a defined sequence of 5 adapted KR/RKR link plates.

Glide shoes must be used for gliding applications.

Only designs 020 and 030 can be used for a gliding arrangement.

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

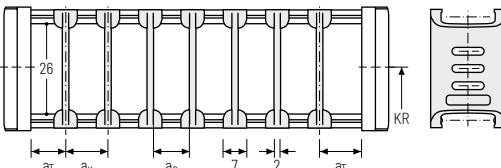

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and lying on the side, divider with arresting cams are available.

The locking cams click into place in the locking grids in the stays (**version B**).

## **Divider system TSO** without height separation

Materials information

MONO series

QuickTrax® series

UNIFLEX Advanced series

TKR35 series

TKK series

EasyTrax® series

**Pitch**  
55.5 mm

**Inner height**  
38 mm

**Inner widths**  
50 - 150 mm

**Bending radii**  
63 - 200 mm

## Stay variants

**Design 020** ..... page 174

### Closed frame

- » Weight-optimised, closed plastic frame with particularly high torsional rigidity.
- » **Outside/inside:** not openable.

**Design 030** ..... page 175

### Frame with outside detachable stays

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Outside:** openable and detachable.

**Design 040** ..... page 176

### Frame with inside detachable stays

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Inside:** openable and detachable.

## Unsupported arrangement

| KR [mm] | H [mm] | H <sub>z</sub> [mm] | L <sub>B</sub> [mm] | U <sub>B</sub> [mm] |
|---------|--------|---------------------|---------------------|---------------------|
| 63      | 176    | 216                 | 309                 | 145                 |
| 80      | 210    | 240                 | 362                 | 165                 |
| 100     | 250    | 280                 | 425                 | 185                 |
| 125     | 300    | 330                 | 504                 | 210                 |
| 160     | 370    | 400                 | 614                 | 245                 |
| 200     | 450    | 480                 | 740                 | 285                 |

**Load diagram for unsupported length** depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight  $q_K = 1.32 \text{ kg/m}$  with  $B_1 = 100 \text{ mm}$ . For other inner widths, the maximum additional load changes.

**Speed**  
up to 9 m/s

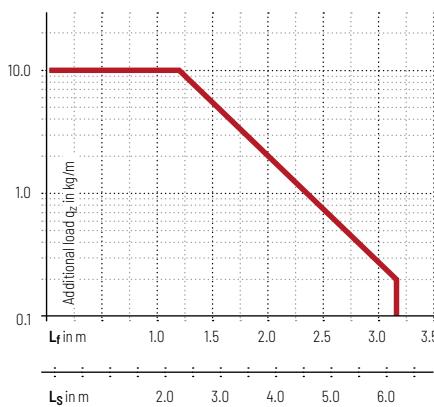

**Acceleration**  
up to  $45 \text{ m/s}^2$

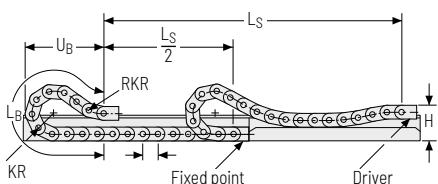

**Travel length**  
up to 6.3 m

**Additional load**  
up to  $10 \text{ kg/m}$

## Gliding arrangement | GO module with chain links optimized for gliding

| KR [mm] | H [mm] | GO module RKR [mm] | L <sub>B</sub> [mm] | U <sub>B</sub> [mm] |
|---------|--------|--------------------|---------------------|---------------------|
| 63      | 150    | 250                | 939                 | 458                 |
| 80      | 150    | 250                | 994                 | 473                 |
| 100     | 150    | 250                | 1105                | 510                 |
| 125     | 150    | 250                | 1272                | 567                 |
| 160     | 150    | 250                | 1438                | 612                 |
| 200     | 150    | 250                | 1771                | 730                 |

**Speed**  
up to 3 m/s

**Acceleration**  
up to  $20 \text{ m/s}^2$

**Travel length**  
up to 125 m

**Additional load**  
up to  $10 \text{ kg/m}$

The gliding cable carrier must be guided in a channel.  
See p. 866.

The GO module mounted on the driver is a defined sequence of 5 adapted KR/RKR link plates.

Glide shoes must be used for gliding applications.

Only designs 020 and 030 can be used for a gliding arrangement.

## Stay variant 020 - closed frame

- » Weight-optimised, closed plastic frame with particularly high torsional rigidity.
- » **Outside/inside:** not openable.

Stay arrangement on each  
chain link (**VS: fully-stayed**)

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

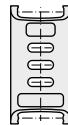

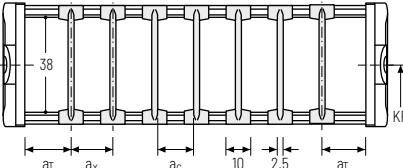

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and lying on the side, divider with arresting cams are available.

The locking cams click into place in the locking grids in the stays **(version B)**.

## **Divider system TSO** without height separation

| Vers. | $\Delta t$ min [mm] | $\Delta x$ min [mm] | $\Delta c$ min [mm] | $\Delta x$ grid [mm] | $\Pi t$ min |
|-------|---------------------|---------------------|---------------------|----------------------|-------------|
| A     | 5                   | 10                  | 7.5                 | -                    | -           |
| B*    | 5                   | 10                  | 7.5                 | 2.5                  | -           |

| 140     | 340    | 375                 | 574                 | 237                 |
| 200     | 460    | 495                 | 762                 | 297                 |
| 250     | 560    | 595                 | 919                 | 347                 |
| 300     | 660    | 695                 | 1076                | 397                 |

**Load diagram for unsupported length** depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight  $q_k = 2.43 \text{ kg/m}$  with  $B=200 \text{ mm}$ . For other inner widths, the maximum additional load changes.

**Speed**  
up to 8 m/s

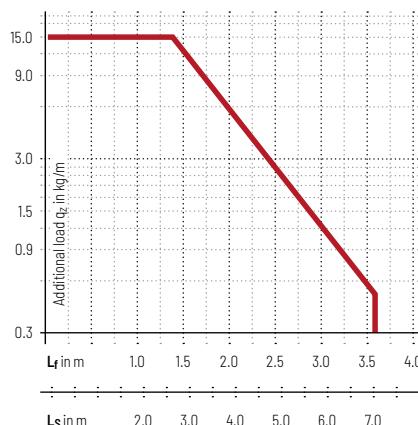

**Acceleration**  
up to  $40 \text{ m/s}^2$

**Travel length**  
up to 7 m

**Additional load**  
up to  $15 \text{ kg/m}$

**Speed**  
up to 3 m/s

**Acceleration**  
up to  $15 \text{ m/s}^2$

**Travel length**  
up to 150 m

**Additional load**  
up to  $15 \text{ kg/m}$

The gliding cable carrier must be guided in a channel.  
See p. 866.

The GO module mounted on the driver is a defined sequence of 5 adapted KR/RKR link plates.

Glide shoes must be used for gliding applications.

Only designs 020 and 030 can be used for a gliding arrangement.

## Stay variant 020 – closed frame

- » Weight-optimised, closed plastic frame with particularly high torsional rigidity.
- » **Outside/inside:** not openable.

Stay arrangement on each  
chain link (**VS: fully-stayed**)

\* indicated according to standard pitch

### Order example

UA1665 . RMAI . 150 . 140 - 2660

VS  
Stay arrangement

### EasyTrax® series

**RMAI – assembly to the inside:**

standard pitch, mounting frame stay on every 4<sup>th</sup> stay,  
no screw fixing.

Gliding application is not possible when using assembly  
version RMAI.

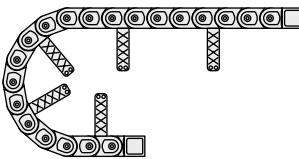

Observe minimum KR:

$H_i = 114$  mm:  $KR_{min} = 200$  mm

$H_i = 139$  mm:  $KR_{min} = 250$  mm

$H_i = 164$  mm:  $KR_{min} = 300$  mm

$H_i = 189$  mm:  $KR_{min} = 300$  mm

**Cross section mounting frame stay**

To achieve a nearly square cross section in the mounting frame stay, we recommend the following combination of  $B_i$  and  $H_i$ :

| $B_i$<br>[mm] | $H_i$<br>[mm] | $KR_{min}$<br>[mm] | Stays<br>[mm] |
|---------------|---------------|--------------------|---------------|
| 125           | 114           | 200                | 100           |
| 150           | 139           | 250                | 125           |
| 175           | 164           | 300                | 150           |
| 200           | 189           | 300                | 175           |

|                         |                   |              |             |                       |                          |                             |               |

Stay arrangement

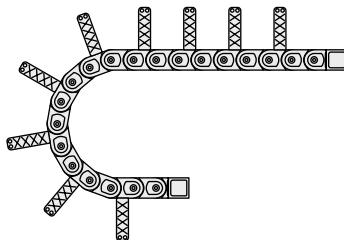

**RMAO – assembly to the outside:**

standard pitch, mounting frame stay on every 2<sup>nd</sup> stay,  
screw fixing.

The cable carrier rests on the bars. A bracket must be provided for the fixed point.

Guiding in a **channel is required** for support. Please contact our technical support at [technik@kabelschlepp.de](mailto:technik@kabelschlepp.de) to find the corresponding guide channel.

Please note the operating and installation height.

**Cross section mounting frame stay**

To achieve a nearly square cross section in the mounting frame stay, we recommend the following combination of  $B_i$  and  $H_i$ :

| $B_i$<br>[mm] | $H_i$<br>[mm] | $KR_{min}$<br>[mm] | Stays<br>[mm] |
|---------------|---------------|--------------------|---------------|
| 125           | 114           | 200                | 100           |
| 150           | 139           | 250                | 125           |
| 175           | 164           | 300                | 150           |
| 200           | 189           | 300                | 175           |

|                         |                   |             |             |                       |                          |                             |               |

|------------------|------------|--------------|-------------------------|-------------------|-------------|-----------------------|--------------------------|-----------------------------|---------------|

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and lying on the side, divider with arresting cams are available.

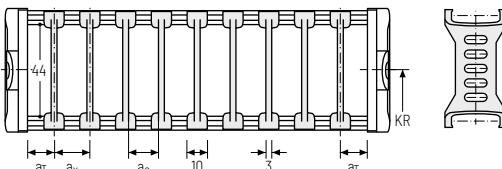

The locking cams click into place in the locking grids in the stays (**version B**).

### Divider system TS0 without height separation

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $a_{x,grid}$ [mm] | $\Pi_T$ min |
|-------|----------------|----------------|----------------|-------------------|-------------|
| A     | 5              | 10             | 7              | -                 | -           |
| B*    | 5              | 10             | 7              | 2.5               | -           |

Number of dividers for design 020 depending on  $\beta_1$

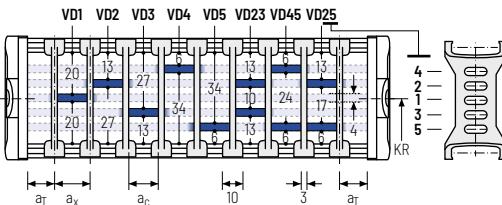

\* not for design 020

### Divider system TS1 with continuous height separation\*

| Vers. | $a_T$ min [mm] | $a_T$ max [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $a_{x,grid}$ [mm] | $\Pi_T$ min |
|-------|----------------|----------------|----------------|----------------|-------------------|-------------|
| A     | 5              | 20             | 10             | 7              | -                 | 2           |
| B     | 5              | 20             | 10             | 7              | 2.5               | 2           |

\* not for design 020

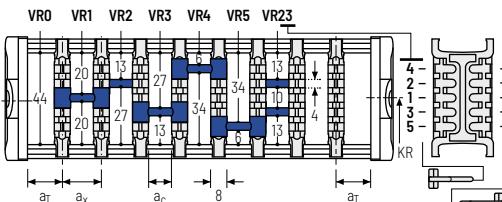

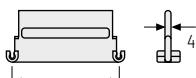

### Divider system TS3 with height separation consisting of plastic section subdivisions\*

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $\Pi_T$ min |
|-------|----------------|----------------|----------------|-------------|
| A     | 4              | 16/40**        | 8              | 2           |

\* not for design 020

\*\* for aluminium partitions

The dividers are fixed with the partitions. The entire divider system can be moved in the cross section.

Aluminium partitions in 1mm increments with  $a_x > 42$  mm are also available.

$a_x$  (centre distance of dividers) [mm]

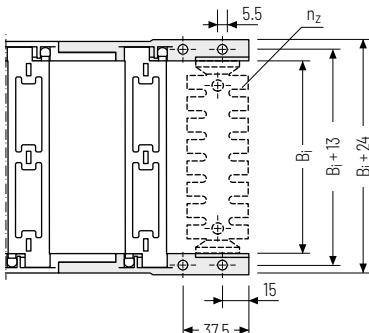

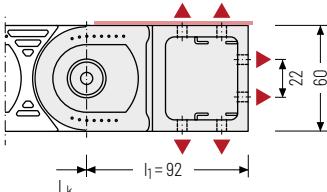

$a_c$  (usable width of inner chamber) [mm]

| 16 | 18 | 23 | 28 | 32  | 33  | 38  | 43  | 48  | 58  | 64  | 68 |
|----|----|----|----|-----|-----|-----|-----|-----|-----|-----|----|
| 8  | 10 | 15 | 20 | 24  | 25  | 30  | 35  | 40  | 50  | 56  | 60 |
| 78 | 80 | 88 | 96 | 112 | 128 | 144 | 160 | 176 | 192 | 208 |    |
| 70 | 72 | 80 | 88 | 104 | 120 | 136 | 152 | 168 | 184 | 200 |    |

When using partitions with  $a_x > 112$  mm, we recommend an additional central support with a **twin divider**. The height separations VD4 and VD5 are not possible when using twin dividers.

## Universal end connectors UMB - plastic (standard)

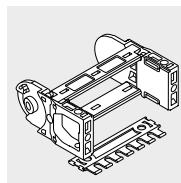

The universal mounting brackets (UMB) are made from plastic and can be mounted **from above, from below or on the face side**.

### ▲ Assembly options

Recommended tightening torque:  
5 Nm for screws M5 - 8.8

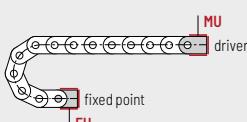

|     | MONO series | $B_j$ [mm] | $n_z$  |
|-----|-------------|------------|--------|
| 50  |             |            | 2 x 3  |
| 75  |             |            | 2 x 5  |
| 100 |             |            | 2 x 7  |
| 125 |             |            | 2 x 9  |
| 150 |             |            | 2 x 11 |
| 175 |             |            | 2 x 13 |

The end connectors are also available as an option **with** strain relief comb or **with** C-rail Art. no 3931 (1 on each side) for clamps. Please state when ordering.

## UNIFLEX Advanced series

### TK35 series

**Connection point**  
F - fixed point  
M - driver

**Connection type**  
U - Universal mounting bracket

### TKK series

## Order example

|  |     |   |   |   |
|--|-----|---|---|---|
|  | UMB | . | F | U |
|  | UMB | . | M | U |

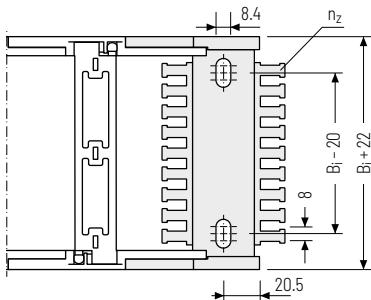

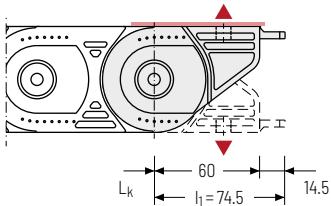

End connector      Connection point      Connection type

We recommend the use of strain reliefs at the driver and fixed point. See from p. 924.

## EasyTrax® series

### Single-part end connectors - plastic

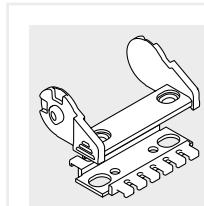

The plastic end connectors can be connected **from above or below**. The connection type can be changed by altering the position of the end connector.

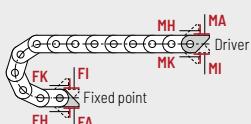

▲ Assembly options

Recommended tightening torque:  
15 Nm for screws M8 - 8.8

| B <sub>i</sub><br>[mm] | n <sub>z</sub> |
|------------------------|----------------|
| 50                     | 2 x 4          |
| 75                     | 2 x 6          |
| 100                    | 2 x 8          |
| 125                    | 2 x 10         |
| 150                    | 2 x 12         |
| 175                    | 2 x 14         |
| 200                    | 2 x 16         |
| 225                    | 2 x 18         |
| 250                    | 2 x 20         |

The end connectors are optionally also available **without** strain relief comb.  
Please state when ordering.

**Connection point**  
F - fixed point  
M - driver

**Connection type**  
A - threaded joint outside (standard)  
I - threaded joint inside  
H - threaded joint, rotated 90° to the outside  
K - threaded joint, rotated 90° to the inside

### Frame with outside detachable stays

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Outside:** openable and detachable.

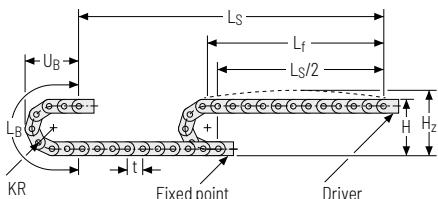

**Design 040** ..... page 200

### Frame with inside detachable stays

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Inside:** openable and detachable.

## Unsupported arrangement

| KR [mm] | H [mm] | Hz [mm] | L_B [mm] | U_B [mm] |
|---------|--------|---------|----------|----------|
| 90      | 257    | 297     | 438      | 206      |
| 115     | 307    | 347     | 516      | 231      |
| 140     | 357    | 397     | 595      | 256      |
| 165     | 407    | 447     | 673      | 281      |
| 190     | 457    | 497     | 752      | 306      |
| 240     | 557    | 597     | 909      | 356      |
| 285     | 647    | 687     | 1050     | 401      |
| 340     | 757    | 797     | 1223     | 456      |

**Load diagram for unsupported length** depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight  $q_K = 3.03 \text{ kg/m}$  with  $B_1 150 \text{ mm}$ . For other inner widths, the maximum additional load changes.

**Speed**  
up to 10 m/s

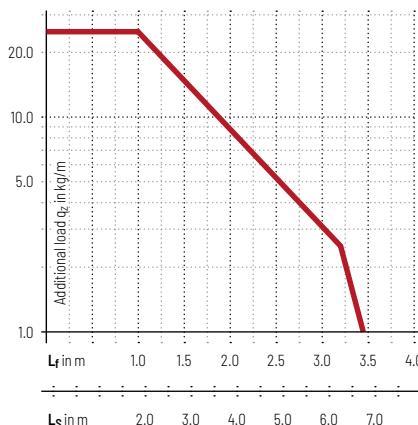

**Acceleration**  
up to  $35 \text{ m/s}^2$

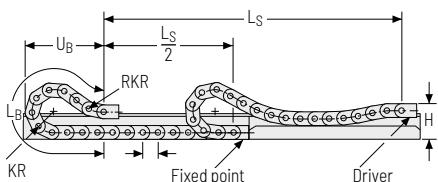

**Travel length**  
up to 6.8 m

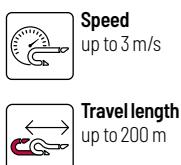

**Additional load**  
up to  $25 \text{ kg/m}$

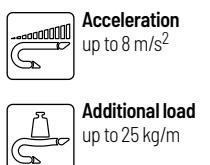

## Gliding arrangement | GO module with chain links optimized for gliding

| KR [mm] | H [mm] | GO module RKR [mm] | L_B [mm] | U_B [mm] |

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

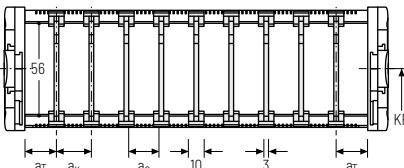

For applications with lateral acceleration and lying on the side, divider with arresting cams are available.

The locking cams click into place in the locking grids in the stays (**version B**).

### Divider system TS0 without height separation

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $a_x$ grid [mm] | $n_T$ min |
|-------|----------------|----------------|----------------|-----------------|-----------|
| A     | 5              | 10             | 7              | -               | -         |
| B     | 5              | 10             | 7              | 2.5             | -         |

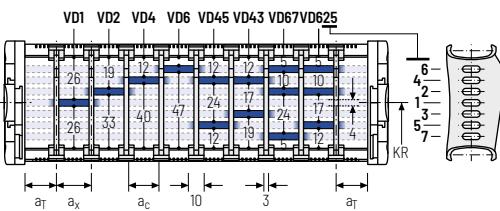

Number of dividers for design 020 depending on  $\beta_1$

### Divider system TS1 with continuous height separation\*

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $a_x$ grid [mm] | $n_T$ min |
|-------|----------------|----------------|----------------|-----------------|-----------|
| A     | 5              | 10             | 7              | -               | 2         |
| B     | 5              | 10             | 7              | 2.5             | 2         |

\* not for design 020

### Order example

|  |                |   |         |   |       |    |                   |
|--|----------------|---|---------|---|-------|----|-------------------|
|  | TS1            | . | A       | . | 3     | -  | VDO               |
|  |                |   |         |   |       | .. |                   |
|  | Divider system |   | Version |   | $n_T$ | -  | Height separation |
|  |                |   |         |   |       | -  | VD1               |

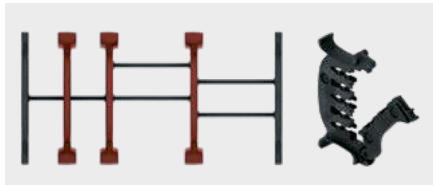

Please state the designation of the divider system (**TS0, TS1,...**), the version, and the number of dividers per cross section [ $n_T$ ].

When using divider systems with height separation (**TS1**), please additionally state the position (e.g. VD1) viewed from the left driver belt. You are welcome to add a sketch to your order.

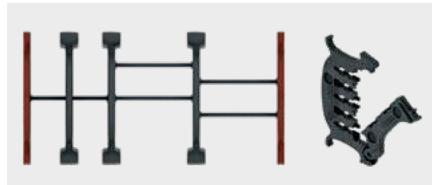

## Divider system TS3 with height separation consisting of plastic partitions

As a standard, the divider **version A** is used for vertical partitioning within the cable carrier. The complete divider system can be moved within the cross section.

### Divider version A

### End divider

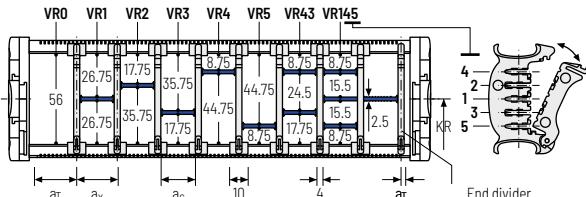

### Configuration guidelines

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $n_T$ min |
|-------|----------------|----------------|----------------|-----------|
| A     | 5 / 2*         | 14             | 10             | 2         |

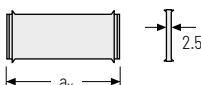

\* For End divider

### Materials information

### MONO series

The dividers are fixed by the partitions, the complete divider system is movable in the cross section.

| $a_x$ (center distance of dividers) [mm]    |    |    |    |    |    |    |    |    |    |    |    |    |    |     |
|---|----|----|----|----|----|----|----|----|----|----|----|----|----|-----|
| $a_c$ (nominal width of inner chamber) [mm] |    |    |    |    |    |    |    |    |    |    |    |    |    |     |
| 14  | 16 | 19 | 23 | 24 | 28 | 29 | 32 | 33 | 34 | 38 | 39 | 43 | 44 | 48  |
| 10  | 12 | 15 | 19 | 20 | 24 | 25 | 28 | 29 | 30 | 34 | 35 | 39 | 40 | 44  |
| 58  | 59 | 64 | 68 | 69 | 74 | 78 | 79 | 80 | 84 | 88 | 89 | 94 | 96 | 99  |
| 54  | 55 | 60 | 64 | 65 | 70 | 74 | 75 | 76 | 80 | 84 | 85 | 90 | 92 | 108 |

When using **partitions with  $a_x > 49$  mm** we recommend an additional preferential central support.

### UNIFLEX Advanced series

## Stay variant 070 – with outside and inside detachable stays

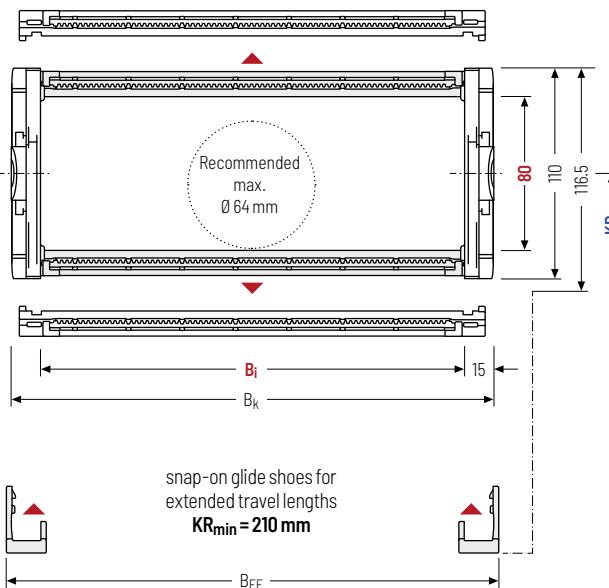

- » Weight-optimised plastic frame with particularly high torsional rigidity.
- » **Outside/Inside:** release by rotating 90°.

Stay arrangement on each chain link (VS: fully-stayed)

$B_i$ : 85 – 250 mm

The maximum cable diameter strongly depends on the bending radius and the desired cable type. Please contact us.

Design 070 is not suitable for a gliding arrangements without the use of gliding shoes.

### Calculating the cable carrier length

#### Cable carrier length $L_k$

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length  $L_k$  rounded to pitch  $t$

| $h_i$<br>[mm] | $h_g$<br>[mm] | $h_g'$<br>[mm] | $B_i$<br>[mm]   | $B_k$<br>[mm] | $B_{EF}$<br>[mm] | $KR$<br>[mm]                   | $q_k$<br>[kg/m] |

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

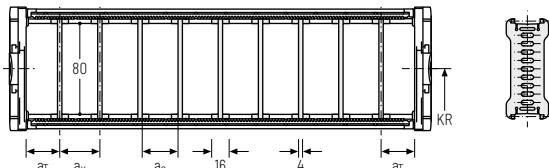

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

For applications with lateral acceleration and lying on the side, divider with arresting cams are available. The locking cams click into place in the locking grids in the stays (**version B**).

### Divider system TSO without height separation

| Vers. | $a_{T\min}$<br>[mm] | $a_{x\min}$<br>[mm] | $a_{c\min}$<br>[mm] | $a_{x\text{grid}}$<br>[mm] | $n_T$<br>min |

\* not for design 020

### Order example

|  |                |   |         |   |       |   |                   |
|--|----------------|---|---------|---|-------|---|-------------------|
|  | TS1            | . | A       | . | 3     | - | V00               |
|  | Divider system |   | Version |   | $n_T$ | - | Height separation |
|  | ::             |   |         |   |       |   |                   |
|  | -              |   |         |   |       |   | VD1               |

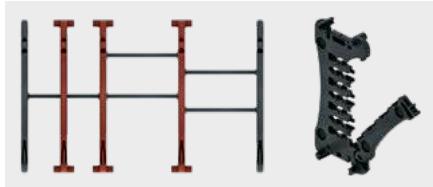

Please state the designation of the divider system (**TS0, TS1...**), the version, and the number of dividers per cross section [ $n_T$ ].

When using divider systems with height separation (**TS1**), please additionally state the position (e.g. VD1) viewed from the left driver belt. You are welcome to add a sketch to your order.

## Divider system TS3 with height separation consisting of plastic partitions

As a standard, the divider **version A** is used for vertical partitioning within the cable carrier. The complete divider system can be moved within the cross section.

**Divider version A**

**End divider**

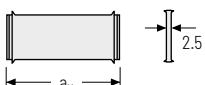

| Vers. | $a_T$ min [mm] | $a_x$ min [mm] | $a_c$ min [mm] | $n_T$ min |
|-------|----------------|----------------|----------------|-----------|
| A     | 8 / 4*         | 14             | 10             | 2         |

Number of dividers for design 020 depending on  $a_T$

\* For End divider

The dividers are fixed by the partitions, the complete divider system is movable in the cross section.

$a_x$  (center distance of dividers) [mm]

$a_c$  (nominal width of inner chamber) [mm]

| 14 | 16 | 19 | 23 | 24 | 28 | 29 | 32 | 33 | 34 | 38 | 39 | 43 | 44 | 48 | 49  | 54 |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|-----|----|
| 10 | 12 | 15 | 19 | 20 | 24 | 25 | 28 | 29 | 30 | 34 | 35 | 39 | 40 | 44 | 45  | 50 |

# UNIFLEX Advanced series

Light and quiet all-rounder

Trademarks are legally protected for the TSUBAKI KABELSCHLEPP GmbH  
as a national or international registration in the following countries:  
[tsubaki-kabelschlepp.com/trademarks](http://tsubaki-kabelschlepp.com/trademarks)

**1** Aluminum stays available in **1 mm width sections**  
**2** Favourable ratio of inner to outer width  
**3** Chain link plates made of at least 35 % pure regranulate

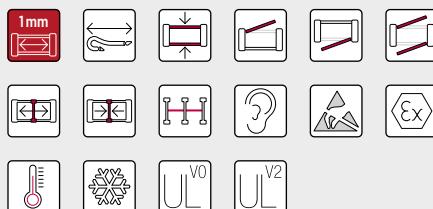

**4** Quick and easy opening to the inside or outside for cable laying  
**5** Fixable dividers  
**6** Many separation options for the cables

**7** Robust double-stroke system for long unsupported lengths  
**8** Replaceable glide shoes  
**9** Very quiet through integrated noise damping

**10** Lateral wear surfaces  
**11** C-rail for strain relief elements

## Features

- » Four designs: closed, and openable to the inner or outer side or to both sides
- » Good ratio of inner to outer width
- » Easy assembly and fast cable laying
- » UMB connectors made of sturdy plastic (strengths comparable to aluminium)
- » Low-wear, cable-friendly design with smooth surface
- » Polygon-optimized bending radii for smooth and low-wear chain running

Replaceable glide shoes – optionally with automatic wear monitoring

UMB connectors made of sturdy plastic (strengths comparable to aluminium)

Lateral wear surfaces – for long service life for applications where the carrier is rotated through 90°

Rear grips at stopper for better force transmission and higher strengths

| 400     | 910    | 940     | 1460     | 500      |
| 500     | 1110   | 1140    | 1770     | 600      |

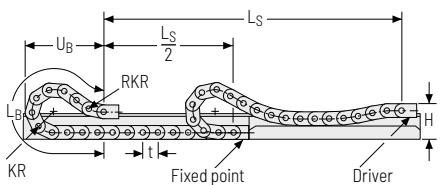

## Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

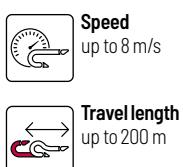

Intrinsic cable carrier weight  $q_K = 3.85 \text{ kg/m}$  with  $B_i = 196 \text{ mm}$ . For other inner widths, the maximum additional load changes.

## Gliding arrangement | GO module with chain links optimized for gliding\*

| 250     | 330    | 400                | 2390     | 1070     |
| 300     | 330    | 400                | 2690     | 1160     |
| 350     | 330    | 400                | 3090     | 1310     |
| 400     | 330    | 400                | 3490     | 1450     |
| 500     | 330    | 400                | 4280     | 1740     |

The gliding cable carrier must be guided in a channel. See p. 866.

The GO module mounted on the driver is a defined sequence of 5 adapted KR/RKR link plates.

Glide shoes must be used for gliding applications.

## Stay variant RSH 020 – closed frame

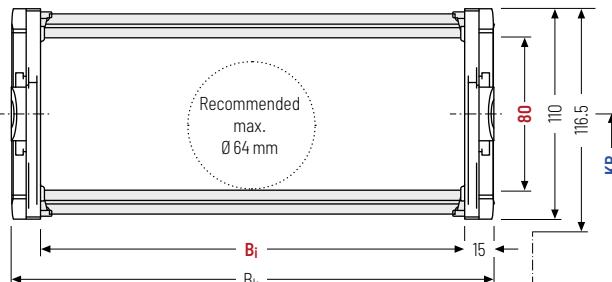

- » Aluminum profile bars for light to medium loads. Assembly without screws.
- » Available customized in **1 mm grid**.
- » **Outside/inside:** not openable.

Stay arrangement on each  
chain link (**VS: fully-stayed**)

**1mm** B<sub>i</sub> 66 – 600 mm  
in **1 mm width sections**

The maximum cable diameter  
strongly depends on the  
bending radius and the  
desired cable type.  
Please contact us.

### Calculating the cable carrier length

#### Cable carrier length L<sub>k</sub>

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length L<sub>k</sub>  
rounded to pitch t

| h <sub>i</sub><br>[mm] | h <sub>G</sub><br>[mm] | h <sub>G'</sub><br>[mm] | B <sub>i</sub><br>[mm]* | B <sub>k</sub><br>[mm] | B <sub>EF</sub><br>[mm] | KR<br>[mm]                  | q <sub>k</sub><br>[kg/m] |

PROTUM® series

## Divider systems

The divider system is mounted on every 2<sup>nd</sup> chain link as a standard.

As a standard, dividers or the complete divider system (dividers with height separations) are movable in the cross section (**version A**).

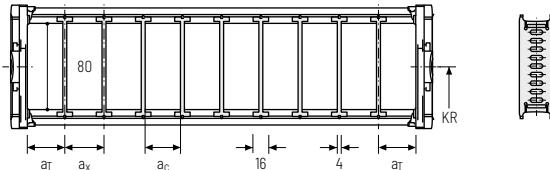

For applications with lateral acceleration and lying on the side, the dividers can be attached by a fixing profile, available as an accessory (**version B**). The fixing profile must be installed at the factory.

K series
